

FORGED-HEAD, SOLID SHANK: THE PROFESSIONAL CHOICE

Forged-head solid-shank tools are ideal for the heaviest-duty industrial applications

To make these rugged tools, the head, shank, and socket are all forged from a single piece of bar steel. A solid steel section (shank) in the neck joins the blade and the socket and provides maximum strength at this critical stress point.

Forged heads are heavier and thicker than stamped heads, so they don't need a frog in the blade and thus won't collect and hold material. The thicker forged blades wear longer than stamped blades.

Best handles in the business for forged tools

Strong tools need strong handles as well as strong heads. Seymour handles are the best you can buy on forged-head tools.

Extra-large D-grip handle

Rugged D-grips provide the best combination of balance, grip, comfort, and durability. Fiberglass handles feature polypropylene D-grips while wooden handles have metal D-grips.

PermaGrip® steel collar

A rivetless ring of steel connects the shovel neck, handle, and fiberglass PowerCore™ rod, making it one solid unit. Provides the strongest head to handle connection.

Safety yellow reinforced fiberglass handles

Strong, yet lightweight, our hollow fiberglass handles provide the maximum in durability and visual impact.

PowerCore™ solid fiberglass reinforcing rod

Extends 12.5 inches from the handle into the shank and blade for maximum strength at this critical stress point.

ProGrip™ comfort grip

Made of durable textured vinyl with a non-slip surface for a secure grip with excellent shock-absorbing protection. Unique double-wall construction for greater durability. Weather resistant.

Rugged forged-head solid-shank design

The head, shank, and socket are all forged from a single piece of bar steel for exceptional strength and long life.

Super tough coating

on hardwood handles repels water better and is more durable than conventional lacquers.

Superior ergonomic design

American ash handles are designed with the best combination of length and contours for ease of use.

American ash handles

have a uniform grain structure that provides both the strength and elasticity needed for the bending stresses these tools must endure.
